

# AFTER VISIT SUMMARY

Steve Kaminczak MRN: 38345229

 Acute midline low back pain with right-sided sciatica  3/3/2025 - 3/7/2025  Memorial Hermann-Texas Medical Center (Jones 5 Neuroscience Acute Care)

## Instructions

Your medications have changed

 START taking:

acetaminophen (Tylenol)

heparin flush

ibuprofen

melatonin

methocarbamol (Robaxin)

oxyCODONE (Roxicodone)

polyethylene glycol (PEG) 3350 (Miralax)

Start taking on: **March 8, 2025**

sennosides (Senokot)

sodium chloride (NS)

sodium chloride 0.9 % solution 100 mL with DAPTOmycin 350 mg/7mL wet vial 600 mg

 CHANGE how you take:

DULoxetine (Cymbalta)

gabapentin (Neurontin)

losartan (Cozaar)

 STOP taking:

clindamycin 300 MG capsule (Cleocin)

Review your updated medication list below.

## Other instructions

Discharge patient instructions (specify)

Instructions:

Steve Kaminczak is a 50 y.o. male presenting with back pain, history of laminectomy many years ago, history of gastric sleeve surgery with complication, SBO s/p gastric bypass, esophageal stricture with J tube placement, h/o TPN via central line for 5 years, recently complicated by MRSA bacteremia and osteomyelitis completed daptomycin course, now able to tolerate p.o. intake (except pills) presented to hospital with worsening back pain that is radiating to his right hip. Patient endorses falling at his school week ago.

## Your Next Steps

 Ask

Ask how to get these medications

- heparin flush
- sodium chloride
- sodium chloride 0.9 % solution 100 mL with DAPTOmycin 350 mg/7mL wet vial 600 mg

 Do

Pick up 10 medications from HEB Pharmacy San Felipe - Houston, TX - 5895 San Felipe St AT San Felipe St & Fountain View Dr

**My Memorial Hermann**

View your After Visit Summary and more online at <https://mychart.memorialhermann.org/MyChart/>.

## Other instructions (continued)

The imaging showed L4-L5 and L5-S1 discitis/osteomyelitis with associated epidural phlegmon. He completed daptomycin course. Has no central line. Patient still takes clindamycin without any prescription. Patient takes over OxyContin from the street for his pain.

During this admission:

NSGY spine recommended I&D but the patient refused as he is a school teacher, lives alone, no financial savings, and he needs 3 months for recovery post op, that's why he wants to be discharged on ABX and get the surgery done in the Summer. IR was consulted to see if he has a drainable abscess, but they said no intervention.

ID recommended:

- Daptomycin 8mg/kg Q24 until 3/16/25
- Every Monday labs: CBC with differential, CMP, CPK, ESR, and CRP

Please fax above labs to (281) 365-0085

Attention Dr Charles Ericsson

Outpatient follow up:

- PCP in 3 days
- Infectious diseases: Patient follows with Dr. Khoury (832-410-1464) who recommended OPAT again for a few months until patient is ready for surgery. OPAT to follow and patient will re-establish care with Dr. Khoury
- Pain management doctor:

UT Pain clinics

Pearland Main Branch: 713-486-6000

MHOSH Pain Clinic: 713-486-6000

Bayshore Pain Clinic: 713-486-6325

---

### Home IV line care

Home IV line care: Yes, home health infusion IV line care per pharmacy protocol

---

### Home IV line disposition

Home IV line disposition: Discontinue after completion

---

### Lab Instructions - Select Labs

Frequency: Weekly on Monday

End Date: 3/16/2025

Discharge Labs: Complete Blood Count w/Diff and Platelet, CK, Total , C-Reactive Protein, Hepatic Function Panel, and Other: BMP

---

### Type of line

Type of line: PICC

Dosing: 5-10 ml's NS before and after meds. 5 ml's of Heparin flush 10 u/ml as final flush.

Maintenance: If not in use, flush with 5-10 ml's of NS and 5 ml's of Heparin flush 10 u/ml daily.

Blood draws: Flush with 10 ml's NS after blood draws. Final flush with 5 ml's Heparin flush 10 u/ml.

Dressing change: Dressing change Weekly and prn.

## Durable Medical Equipment

### Walker rolling

The face to face evaluation was performed on: 3/5/2025

Justification: Canes, Crutches, Walkers, Patient Lift (Home Health)

Canes, Crutches, Walkers, Patient Lift:

Walker: Patient will be unable to safely ambulate with a cane in the home but a walker will allow the patient to accomplish mobility related daily living activities.

Other: See Comments

---

### Walker rolling

The face to face evaluation was performed on: 3/6/2025

Justification: Canes, Crutches, Walkers, Patient Lift (Home Health)

Canes, Crutches, Walkers, Patient Lift:

## Durable Medical Equipment (continued)

Walker: Patient will be unable to safely ambulate with a cane in the home but a walker will allow the patient to accomplish mobility related daily living activities.  
Other: See Comments

# Medication List

		Morning	Around Noon	Evening	Bedtime	As Needed
 <b>START</b>	<b>acetaminophen</b> 500 MG tablet Commonly known as: Tylenol Take 2 tablets by mouth every 6 hours. Last time this was given: March 7, 2025 2:35 PM			Take 2 tablets by mouth every 6 hours.		
 <b>CONTINUE</b>	<b>amphetamine-dextroamphetamine</b> 30 MG tablet Commonly known as: Adderall Take 30 mg by mouth in the morning and 30 mg in the evening.	✓ 1 tablet		✓ 1 tablet		
 <b>CHANGE</b>	<b>DULoxetine</b> 60 MG DR capsule Commonly known as: Cymbalta Take 1 capsule by mouth 1 time each day. Last time this was given: March 7, 2025 8:36 AM What changed: • medication strength • how much to take • when to take this	✓ 1 capsule				
 <b>CHANGE</b>	<b> gabapentin</b> 600 MG tablet Commonly known as: Neurontin Take 2 tablets by mouth in the morning and 2 tablets at noon and 2 tablets in the evening. Last time this was given: Ask your nurse or doctor What changed: • medication strength • how much to take • when to take this	✓ 2 tablets	✓ 2 tablets	✓ 2 tablets		
 <b>START</b>	<b>* heparin flush</b> 10 units/mL injection 3 mL by Intracatheter route if needed for line care. After each dose or daily if not used.					✓ 3 mL
 <b>START</b>	<b>* heparin flush</b> 100 units/mL solution 3 mL by Intracatheter route if needed for line care. After each dose or daily if not used.					✓ 3 mL
 <b>START</b>	<b>ibuprofen</b> 800 MG tablet Take 1 tablet by mouth every 8 hours if needed for mild pain (1-3) or headaches for up to 10 days. Last time this was given: March 6, 2025 5:14 AM					✓ 1 tablet

## Medication List (continued)

		Morning	Around Noon	Evening	Bedtime	As Needed
 <b>CONTINUE</b>	<b>LORazepam</b> 1 MG tablet Commonly known as: Ativan Take 1 mg by mouth daily as needed. Last time this was given: March 5, 2025 10:24 PM					 1 tablet
 <b>CHANGE</b>	<b>losartan</b> 100 MG tablet Commonly known as: Cozaar Take 1 tablet by mouth 1 time each day. Last time this was given: March 7, 2025 8:36 AM What changed: <ul style="list-style-type: none"> <li>• medication strength</li> <li>• how much to take</li> <li>• when to take this</li> </ul>	 1 tablet				
 <b>START</b>	<b>melatonin</b> 3 MG tablet Take 2 tablets by mouth as needed at bedtime for sleep.					 2 tablets
 <b>START</b>	<b>methocarbamol</b> 500 MG tablet Commonly known as: Robaxin Take 1 tablet by mouth every 6 hours for 15 days. Last time this was given: March 7, 2025 2:35 PM	Take 1 tablet by mouth every 6 hours for 15 days.				
 <b>START</b>	<b>oxyCODONE</b> 10 MG immediate release tablet Commonly known as: Roxicodone Take 1 tablet by mouth every 6 hours if needed for severe pain (7-10) for up to 5 days. Last time this was given: March 7, 2025 2:43 PM					 1 tablet
 <b>START</b>	<b>polyethylene glycol (PEG) 3350</b> 17 g packet Commonly known as: Miralax Start taking on: <b>March 8, 2025</b> Take 17 g by mouth 1 time each day for 3 days. Last time this was given: March 5, 2025 9:43 AM	 17 g				
 <b>START</b>	<b>sennosides</b> 8.6 MG tablet Commonly known as: Senokot Take 2 tablets by mouth at bedtime. Last time this was given: March 4, 2025 8:24 PM				 2 tablets	
 <b>START</b>	<b>sodium chloride</b> 0.9 % flush Commonly known as: NS 10 mL by Intracatheter route if needed for line care. Before and after each dose or daily if not used. Last time this was given: March 7, 2025 2:46 PM					 10 mL

## Medication List (continued)

	Morning	Around Noon	Evening	Bedtime	As Needed
 <b>START</b> <b>sodium chloride 0.9 % solution 100 mL with DAPTOmycin 350 mg/7mL wet vial 600 mg</b> Infuse 600 mg at 224 mL/hr over 30 minutes into a venous catheter 1 time each day at the same time for 10 days. Last time this was given: March 7, 2025 2:35 PM	 600 mg				

 \* This list has 2 medication(s) that are the same as other medications prescribed for you. Read the directions carefully, and ask your doctor or other care provider to review them with you.

## Where to pick up your medications

Pick up these medications at HEB Pharmacy San Felipe - Houston, TX - 5895 San Felipe St AT San Felipe St & Fountain View Dr

- acetaminophen 500 MG tablet
- DULoxetine 60 MG DR capsule
- gabapentin 600 MG tablet
- ibuprofen 800 MG tablet
- losartan 100 MG tablet
- melatonin 3 MG tablet
- methocarbamol 500 MG tablet
- oxyCODONE 10 MG immediate release tablet
- polyethylene glycol (PEG) 3350 17 g packet
- sennosides 8.6 MG tablet

Address: 5895 San Felipe St, Houston TX 77057-3061  
Phone: 713-278-8474

Ask your doctor where to pick up these medications

- heparin flush 10 units/mL injection

## Discharge Instructions for Osteomyelitis

You have a condition called osteomyelitis. This is a bone infection caused by bacteria or fungi. It may have spread through the blood from an area of your body to the bone. This condition is called acute when the infection is new. It's called chronic when you've had it for a longer time.

### Home care

- Take your medicine exactly as directed. If you were given antibiotics or antifungal medicine, make sure you finish all of the medicine even if you feel better. If you don't finish the medicine, the infection may return. This may make future infections harder to treat.
- Be careful not to injure the area where you have the infection.
- Carefully follow all instructions for taking care of any wounds.
- Use a splint, sling, or brace as directed by your doctor.

### Follow-up care

Make a follow-up appointment as directed.

### When to get medical care

Contact your doctor if you have any of the following:

- Increasing pain, redness, swelling, or drainage in the infected area
- Fever of 100.4° F ( 38°C) or higher, or as advised by your provider
- Chills
- Increasing fatigue or feeling tired

Last Reviewed Date: 01/01/2025 00:00:00

## Daptomycin Injection

**Brand Name(s): Cubicin®, Cubicin RF®; also available generically**

### WHY is this medicine prescribed?

Daptomycin injection is used to treat certain blood infections or serious skin infections caused by bacteria in adults and children 1 year of age and older. Daptomycin injection is in a class of medications called cyclic lipopeptide antibiotics. It works by killing bacteria.

Antibiotics such as daptomycin injection will not work for treating colds, flu, or other viral infections. Using antibiotics when they are not needed increases your risk of getting an infection later that resists antibiotic treatment.

### HOW should this medicine be used?

Daptomycin injection comes as a powder to be added to fluid and injected into a vein by a doctor or nurse. It is usually given once a day. The length of your treatment depends on the type of infection being treated and your response to daptomycin treatment. You may receive daptomycin injection in a hospital or you may administer the medication at home. If you will be using daptomycin injection at home, your healthcare provider will show you how to infuse the medication. Be sure that you understand these directions, and ask your healthcare provider if you have any questions. Ask your healthcare provider what to do if you have any problems infusing daptomycin injection.

You should begin to feel better during the first few days of treatment with daptomycin injection. If your symptoms do not improve or if they get worse, call your doctor.

Use daptomycin injection until you finish the prescription, even if you feel better. If you stop using daptomycin injection too soon or skip doses, your infection may not be completely treated and the bacteria may become resistant to antibiotics.

### Are there OTHER USES for this medicine?

This medication may be prescribed for other uses; ask your doctor or pharmacist for more information.

### What SPECIAL PRECAUTIONS should I follow?

Before using daptomycin injection,

- tell your doctor and pharmacist if you are allergic to daptomycin, any other medications, or any of the ingredients in daptomycin injection. Ask your pharmacist for a list of the ingredients.
- tell your doctor and pharmacist what other prescription and nonprescription medications, vitamins, nutritional supplements, and herbal products you are taking or plan to take while using daptomycin injection. Your doctor may need to change the doses of your medications or monitor you carefully for side effects.

- tell your doctor if you have or have ever had kidney disease.
- tell your doctor if you are pregnant, plan to become pregnant, or are breastfeeding. If you become pregnant while using daptomycin injection, call your doctor.

### **What SPECIAL DIETARY instructions should I follow?**

Unless your doctor tells you otherwise, continue your normal diet.

### **What SIDE EFFECTS can this medicine cause?**

Some side effects can be serious. If you experience any of these symptoms, call your doctor immediately:

- hives
- rash
- itching
- blisters or peeling of skin
- difficulty breathing or swallowing
- swelling of the face, throat, tongue, lips, and eyes
- shortness of breath
- chest pain
- cough
- new or worsening fever, sore throat, chills, increased urge to urinate, burning sensation when urinating, or other signs of infection
- severe diarrhea with watery or bloody stools (up to 2 months after your treatment)
- muscle pain or weakness, especially in the forearms and lower legs
- dark or cola-colored urine
- pain, burning, numbness, or tingling in the hands or feet

Daptomycin injection may cause other side effects. Call your doctor if you have any unusual problems while using this medication.

If you experience a serious side effect, you or your doctor may send a report to the Food and Drug Administration's (FDA) MedWatch Adverse Event Reporting program online (<https://www.fda.gov/Safety/MedWatch>) or by phone (1-800-332-1088).

### **What should I do in case of OVERDOSE?**

In case of overdose, call the poison control helpline at 1-800-222-1222. Information is also available online at <https://www.poisonhelp.org/help>. If the victim has collapsed, had a seizure, has trouble breathing, or can't be awakened, immediately call emergency services at 911.

### **What OTHER INFORMATION should I know?**

Keep all appointments with your doctor and the laboratory. Your doctor may order certain lab tests to check your body's response to daptomycin injection.

Before having any laboratory test, tell your doctor and the laboratory personnel that you are using daptomycin injection.

Do not let anyone else use your medication. If you still have symptoms of infection after you finish daptomycin injection, call your doctor.

It is important for you to keep a written list of all of the prescription and nonprescription (over-the-counter) medicines you are taking, as well as any products such as vitamins, minerals, or other dietary supplements. You should bring this list with you each time you visit a doctor or if you are admitted to a hospital. It is also important information to carry with you in case of emergencies.

This report on medications is for your information only, and is not considered individual patient advice. Because of the changing nature of drug information, please consult your physician or pharmacist about specific clinical use.

## PICC Line Care

PICC stands for peripherally inserted central catheter. This is a short-term (temporary) tube that's used instead of a regular IV (intravenous) line.

### Reasons for using a PICC line

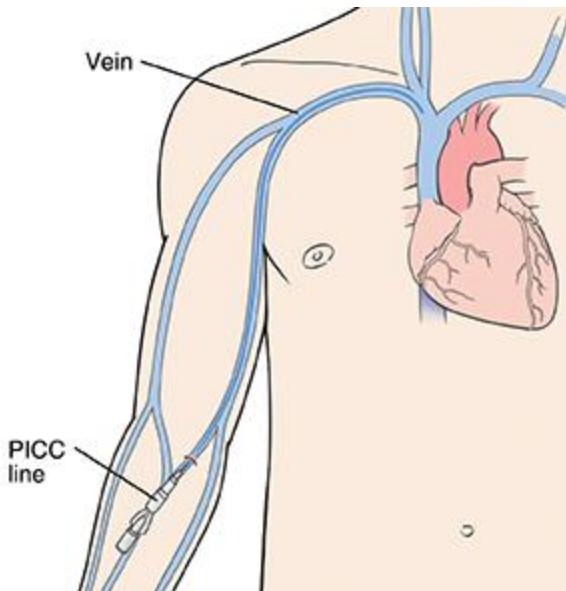

A PICC line may be used because:

- It reduces the discomfort of putting in a new IV every time one is needed.
- Medicine or nutrition needs to be given over a period of weeks or even months.
- A PICC can stay in place longer than an IV, so it reduces needle sticks.
- It reduces damage to small veins, where an IV is normally inserted. This can allow some substances that damage small veins to be infused safely and comfortably.
- A PICC may have more than one channel, so different fluids or medicines can be given at the same time.
- A PICC line allows for home therapy.

Your PICC will need some care to keep it clean and working. This care includes:

- Changing the bandage (dressing)
- Flushing the catheter with fluids
- Changing the cap on the end of the catheter

A nurse or other healthcare provider will teach you how to do each of these things. If you have any questions, contact your healthcare team.

## Home care

The following are general care guidelines that will help you care for your PICC line at home:

- You can use your arm. But avoid any activity that causes mild pain.
- Don't pick at it or pull on the tubing.
- Don't lift anything heavier than 10 pounds with the arm on the side of the PICC line.
- The PICC line and dressing can't get wet. When you bathe or shower, tape plastic wrap over the site to keep it dry.
- Don't put the PICC site under water. No swimming or hot tubs. If the dressing gets wet, change it right away if you've been trained to do so. If not, call your healthcare team.
- Always wash your hands with soap and clean, running water before and after touching any part of your PICC.
- Don't allow the tubing to hang freely. Make sure to keep the tubing covered and secured to your arm to prevent the PICC line from being pulled out by accident.

The following tips will help you with dressing changes:

- Change the dressing over the site as directed. This is usually once a week. Change it sooner if the dressing gets wet or soiled. Check the dressing daily.
- You or a family member may be able to do the dressing change at home. Or you may be instructed to return to the office or clinic for dressing changes.
- Sterile technique must be used for PICC dressing change. If your dressing is changed at home, be sure you or your family member knows sterile dressing technique. Call your healthcare provider for instructions if you need them.

## Follow-up care

Follow up as advised by your healthcare provider.

## When to get medical care

Call your healthcare provider right away if any of these occur:

- Fever of 100.4°F (38°C) or higher, or as advised by your provider
- Drainage from the PICC site
- Swelling or bulging around the PICC site, or anywhere above the insertion site
- Bleeding from the PICC site
- Skin pulling away from the PICC site
- Redness, warmth, or pus at the PICC site
- Tubing breaks, splits, or leaks
- More exposed tubing (tubing seems longer) or the tubing is pulled out completely
- Medicine or fluids don't drain from the bag into your PICC

Last Reviewed Date: 05/01/2022 00:00:00

## Flushing Your PICC Line at Home

Your peripherally inserted central catheter (PICC) line is used to deliver medicine or feedings. It's a long, flexible tube (catheter) that goes into your vein, runs into larger veins, and ends up with the tip near where the superior vena cava enters your heart. To care for your PICC line, you will need to flush it. This means you'll need to clean it with a solution as directed by your healthcare provider. This keeps it from getting clogged or blocked. A clogged or blocked PICC line will need to be taken out and replaced.

### When to flush your PICC line

You'll need to flush your PICC line as often as directed by your healthcare provider. You may need to flush it after each use. If the PICC line is not in active use, you may need to flush it once a day. Or you may only need to flush it once a week. Talk with your healthcare provider about how often you should do this.

### What you'll need

- Flushing solution. This is the liquid that you will send through the PICC line. Your healthcare provider will tell you what kind to use. In most cases, it is saline solution. This is a sterile mix of water and a tiny amount of salt. Your healthcare provider will also tell you how much to use. You may also need to flush with a heparin solution after the saline. Heparin is a medicine that thins the blood. It helps prevent blood from clotting in and around the catheter.
- A syringe. This is the device used to give an injection, or shot. A syringe is used to flush your PICC line with the solution. You will probably use prefilled syringes.
- Alcohol wipes or rubbing alcohol and cotton balls. You'll use these to clean some of the tools used to flush your line. This helps to prevent germs from going into your PICC line.
- Clean medical gloves.

### How to flush your PICC line

Repeat these steps as often as your healthcare provider has instructed. Skip steps 2 and 3 if you are using prefilled syringes.

#### Step 1. Wash your hands

- Wash your hands well with soap and clean running water for at least 20 seconds. Scrub them well, including the backs of your hands and between your fingers.
- If you don't have access to soap and water, use an alcohol-based hand gel. The gel should have at least 60% alcohol. Let the hands dry.

- Put on clean medical gloves.
- Only touch your PICC line with clean hands and when wearing clean gloves. This is to protect you from infection and to keep the line free from germs.

### Step 2. Fill the syringe

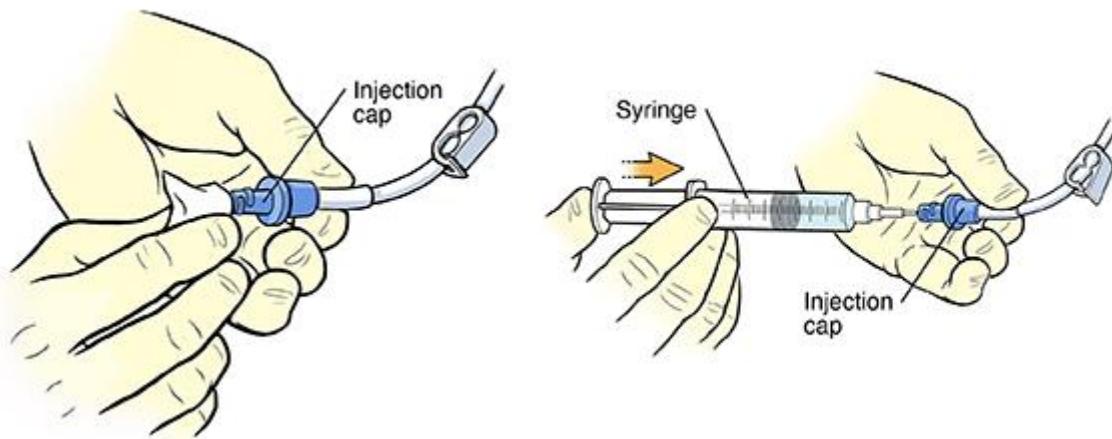

- Open a new bottle of the flushing solution. If you're using a bottle that's already open, use the alcohol to clean the top of the bottle.
- Remove the cap from the needle or tip of the syringe. Push the plunger of the syringe down all the way.
- Put the needle or tip of the syringe into the flushing solution.
- Pull the syringe plunger out. Stop when you have the right amount of flushing solution in the syringe. Your healthcare provider will tell you how much to use.

### Step 3. Remove air from the syringe

- Hold the syringe with the tip pointing up.
- Flick or tap the syringe with your finger. This will cause any large air bubbles to rise into the tip.
- Slowly push on the plunger until a tiny drop of flushing solution comes out of the needle or tip.
- Put the cap back on the needle or tip of the syringe. This will keep it germ-free until you use it.

### Step 4. Inject the flushing solution

- Scrub the top and sides of the port (end of the catheter) with an alcohol wipe for 15 seconds. Scrub using a twisting motion as if juicing an orange. Let it dry completely. Prevent it from touching anything while drying. Don't blow on it. Don't reuse the alcohol wipe. Keep the port from touching anything until you connect the syringe. If you accidentally touch the port, clean it again.
- Open the clamp, if there is one.
- Take the cap off the needle or tip of the syringe. Insert the needle or tip into the port. Make sure you know if your PICC has a needleless connector. Ask your healthcare provider if you aren't sure.
- Push the plunger in slowly and smoothly. Don't force the plunger. You shouldn't feel any pressure when you push the fluid into the PICC line. If you do, stop and call your healthcare provider right away.

### Step 5. Finish flushing

- If there is a clamp, close it just before the syringe is empty. This stops blood from flowing back into the catheter.
- Remove the needle or tip of the syringe from the port.
- Put the syringe into a special container (sharps container).

## When to call your healthcare provider

Call your healthcare provider right away if you have:

- Fever of 100.4°F (38°C) or higher, or as directed by your healthcare provider
- Chills during or after flushing your line
- Swelling, redness, drainage, or pain around the PICC site
- Bleeding from the PICC site
- Tubing that leaks or is pulling out
- A feeling of new resistance when flushing the PICC line, or can't flush it at all
- Medicine or fluids that don't drain from the bag into your PICC

## Have Healthcare Questions?

When you need evidence-based health care advice fast:

- Call the **24/7 Nurse Health Line** at **713-338-7979** or **855-577-7979**, or
- Visit us online at **Nursehealthline.org**

How it works:

- This service is free for everyone, regardless of insurance coverage.
- Registered nurses will answer all sorts of health questions, including questions about your follow up instructions, where to go to receive further care, home treatment options, and any other healthcare concerns.

## Additional Resources

This list provides information about some of the resources that may be available in your area. It does not include all of the services and agencies in this region, but does provide a substantial number of them. Individuals are encouraged to contact the agency that is of interest to learn more and make sure it meets your needs. Other than Memorial Hermann

## Additional Resources (continued)
